Realistic Crab

Very versatile, the RipTide Crab can be rigged on a small jighead similar to how you would rig a live crab. In shallow clear water, fishing for tailing reds, rig it on a #1 live bait hook, weighted with a split shot. In current over sand, it can be rigged on a quarter-ounce jighead under a float — the float will help it “crawl” naturally. It should be fished very slowly with little action, paying particular attention when moving through sand in potholes.
